

Feliciano Giustino is the W. A. Tex Moncrief Chair in Quantum Materials Engineering and a Professor of Physics at the University of Texas, Austin. He earned his Ph.D. in Physics at the Ecole Polytechnique Fédérale de Lausanne (EPFL), Switzerland, and held a post-doctoral appointment at the University of California, Berkeley. Prior to joining the University of Texas he spent over a decade at the University of Oxford as Professor of Materials Science, and one year at Cornell University as the Mary Shepard B. Upson Visiting Professor in Engineering. He is the recipient of a Leverhulme Research Leadership Award and a Fellow of the American Physical Society. Giustino specializes in electronic structure theory, high-performance computing, and the atomic-scale design of advanced materials using quantum mechanics. He is author of 150+ scientific publications and one book on density-functional theory by Oxford University Press. He initiated the open-source software project EPW for ab initio calculations of electron-phonon interactions and related materials properties, which is regularly used by research groups around the world.
